

# Emergency Egress Window Well System...

## One Module and Cover does it all!

- Simply stack modules to accommodate virtually any foundation height.
- Meets IRC 2009 building code requirements for emergency egress in basement living areas.
- Built-in Grip/Step design eliminates the need and cost of an additional ladder.
- The ideal replacement for rusty metal window wells. High-density polyethylene construction will never rust, rot or discolor.
- Adds natural light and ventilation to basement areas, making them as warm and comfortable as any room in the home.
- Optional dome cover protects the well area from snow, leaves and debris.

Unique "Grip/Step"

Tabbed Inserts

Preset Key Holes

**New and Improved Model...** Now features high-density polyethylene molded inserts — the same maintenance-free material as the wells — which add strength and rigidity to withstand adverse freeze/thaw and settling conditions while simplifying the backfilling process.

Remove inserts from lower module

Slide and mate modules together

Lock to form a cohesive assembly

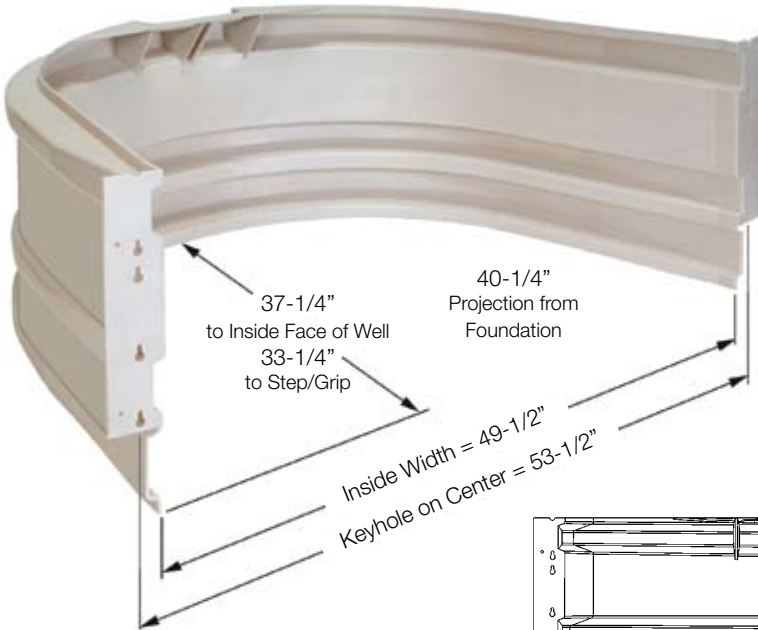

**Imagine...**  
*What Bilco can do for your basements*

### Added Benefits:

- Satisfies Section R310.2 of the IRC 2009 Building Code for basement egress
- High-density polyethylene molded construction will never rust, rot or discolor
- Maintenance-free
- Standard 5-year warranty
- Optional clear polycarbonate cover available

### Sizes and Dimensions

### One Module does it all

Modular system can be used on foundations of up to ten feet and greater in depth.

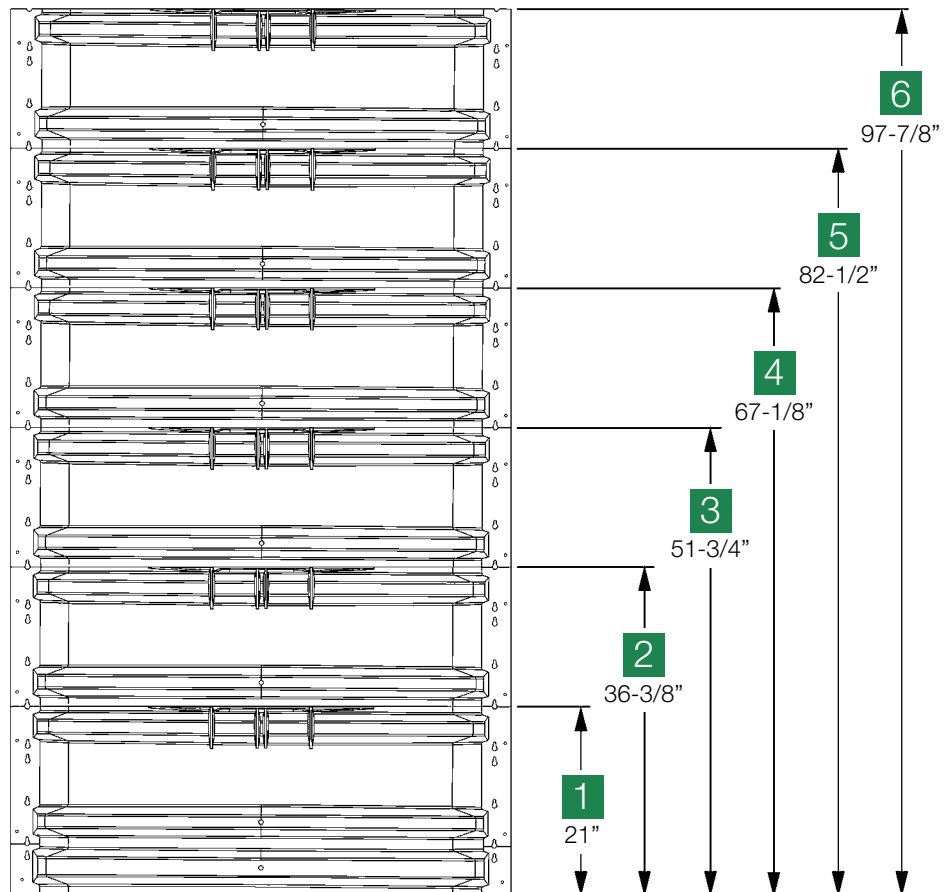

Single modules work well with 16", 20" & 24" utility windows.

#### stakWEL Dome Cover

Limits the accumulation of snow, leaves and debris. Constructed of polycarbonate, this high impact cover is UV-resistant and designed for durability and long-life. Dome is designed to withstand a 40 PSF load and is supplied with quick release hold-down clips.

Simply select the number of modules to determine the assembled well height
